Engineering Reliable Industrial Solutions

A Brand by RIGITRADE AG

Swiss Controls is a Swiss engineering and technology company delivering industrial automation, electrical engineering, industrial electrification, system integration, digital industrial solutions, and technical consulting for industrial, utility, infrastructure, and energy projects.

From concept development and detailed engineering to commissioning and lifecycle support, we help our clients improve operational performance, increase reliability, reduce lifecycle costs, and accelerate digital transformation through intelligent automation and integrated engineering solutions.

Headquartered in **Zürich, Switzerland**, Swiss Controls supports clients throughout Switzerland, Europe, the GCC, the Middle East, and Africa.

Independent Engineering. Intelligent Integration. Reliable Performance.

We Help Industry Perform Better

We combine more than two decades of international engineering experience with Swiss quality standards to deliver independent, practical, and future-ready solutions for modern industry.

Whether developing a new industrial facility, modernizing an existing plant, or integrating advanced automation technologies, Swiss Controls provides engineering expertise that transforms complex technical challenges into reliable operational solutions.

ABOUT US

Engineering Beyond Integration

Today's industrial facilities require more than quality equipment.

They require engineering expertise capable of integrating electrical infrastructure, automation, instrumentation, industrial communication networks, and digital technologies into one reliable, efficient, and future-ready operating environment.

Swiss Controls was created to bring together decades of engineering expertise under one independent Swiss engineering brand dedicated to industrial automation, electrification, and system integration.

As a brand of **RIGITRADE AG**, we operate as an independent engineering partner supporting industrial clients, EPC contractors, utilities, and infrastructure developers throughout every phase of the project lifecycle.

Unlike equipment manufacturers, Swiss Controls provides vendor-independent engineering and technology selection, allowing clients to implement the most appropriate technical solution without being limited to a single vendor ecosystem.

Our engineering philosophy is built upon Swiss values:

- Precision
- Quality
- Reliability
- Transparency
- Long-Term Value

WHY CLIENTS TRUST US

Our engineering team brings more than **20 years of international experience** in industrial electrification, automation, process control, and system integration.

Our engineers have successfully delivered projects using technologies from internationally recognized manufacturers including:

- ABB
- Siemens
- Schneider Electric
- Rockwell Automation
- Beckhoff
- Phoenix Contact
- WAGO
- Mitsubishi Electric
- Omron
- Cisco Industrial Networking
- Pepperl+Fuchs

Our experience spans manufacturing, utilities, renewable energy, water & wastewater, oil & gas, pharmaceuticals, infrastructure, food processing, mining, and heavy industry.

This breadth of experience enables us to develop technically sound, commercially practical, and future-ready engineering solutions.

SERVICES

Industrial Automation

We engineer intelligent automation systems that improve productivity, operational reliability, process safety, and digital transformation.

Our expertise includes PLC and DCS engineering, SCADA systems, HMI development, process automation, motion control, industrial communication networks, Industrial IoT, and manufacturing digitalization.

Every automation architecture is designed to remain scalable, secure, maintainable, and ready for future expansion.

Electrical Engineering & Industrial Electrification

Reliable industrial operations begin with robust electrical engineering.

Swiss Controls provides engineering services for low- and medium-voltage electrical systems, industrial power distribution, motor control centres, protection systems, power system studies, industrial electrification, and energy optimization.

Every engineering solution is developed in accordance with international standards while emphasizing reliability, maintainability, efficiency, and lifecycle performance.

System Integration

Modern industrial facilities depend on seamless interaction between automation, electrical systems, instrumentation, and communication infrastructure.

Swiss Controls integrates these technologies into unified, high-performance solutions that improve plant availability, simplify maintenance, and reduce operational risk.

Our services include:

- PLC Control Systems
- MCC & PCC Systems
- RTU Systems
- Industrial Communication Networks
- Factory Acceptance Testing (FAT)

- Site Acceptance Testing (SAT)
 - Commissioning
 - Startup Support
 - System Optimization
-

Engineering & Technical Consulting

We support projects from concept development through detailed engineering and operational handover.

Our services include:

- Front-End Engineering Design (FEED)
- Electrical Engineering
- Instrumentation Engineering
- Functional Design Specifications (FDS)
- Control Philosophies
- Power System Studies
- Technical Specifications
- Tender Documentation
- Vendor Evaluation
- Owner's Engineering
- Engineering Reviews
- Technical Audits

Independent engineering ensures every recommendation is based on technical excellence, operational performance, and lifecycle value.

Commissioning & Lifecycle Services

Engineering excellence continues long after installation.

Swiss Controls provides commissioning, startup assistance, modernization, migration, preventive maintenance, troubleshooting, and long-term engineering support designed to maximize asset availability while protecting our clients' investments.

Procurement & Strategic Sourcing

Engineering excellence requires qualified manufacturing partners.

Through our international network of carefully selected European and international OEM manufacturers, Swiss Controls supports the sourcing and procurement of:

- Medium Voltage Switchgear
- Low Voltage Systems
- Power Transformers
- Motor Control Centres
- Automation Equipment
- Instrumentation
- Industrial Control Systems

Every manufacturer is evaluated based on engineering capability, quality systems, international certifications, export experience, and lifecycle support.

CORE CAPABILITIES

- Industrial Automation
- Electrical Engineering
- Industrial Electrification
- System Integration
- Process Control
- Digital Industrial Solutions
- Industrial Communication Networks
- SCADA & DCS Engineering
- Power System Studies
- Commissioning & Startup
- Asset Modernization
- Owner's Engineering
- Technical Consulting
- Procurement Support
- Project Management

OUR ENGINEERING PROCESS

Discover

Understanding operational objectives, technical requirements, and business expectations.

Engineer

Developing reliable, standards-compliant engineering solutions optimized for safety, maintainability, and lifecycle cost.

Integrate

Connecting automation, electrical, instrumentation, communication, and digital technologies into one coordinated operating environment.

Deliver

Supporting manufacturing, Factory Acceptance Testing, commissioning, startup, and operational handover.

Support

Providing lifecycle engineering, modernization, maintenance, troubleshooting, and continuous technical support.

INDUSTRIES

Swiss Controls supports projects across a broad range of industries:

- Manufacturing
 - Utilities
 - Power Generation
 - Renewable Energy
 - Water & Wastewater
 - Oil & Gas
 - Chemical & Petrochemical
 - Mining & Metals
 - Pharmaceutical
 - Food & Beverage
 - Infrastructure
 - Transportation
 - Data Centres
-

WHO WE WORK WITH

Our clients include:

- Industrial Manufacturers
- Utilities
- EPC Contractors
- Infrastructure Developers
- Renewable Energy Developers
- Water Authorities
- OEMs
- Machine Builders
- Industrial Integrators

TECHNOLOGY EXPERTISE

Our engineers have extensive experience working with internationally recognized technologies including:

ABB • Siemens • Schneider Electric • Rockwell Automation • Beckhoff • Phoenix Contact • WAGO • Mitsubishi Electric • Omron • Cisco • Pepperl+Fuchs

Our technology-independent approach enables us to recommend the most appropriate platform for every application while protecting our clients' long-term operational interests.

OUR VALUES

Engineering Integrity

Every recommendation is based on technical excellence, operational performance, and long-term value.

Quality

Swiss engineering principles guide every phase of every project.

Partnership

Long-term relationships built on trust, transparency, responsiveness, and technical competence.

Innovation

Applying modern technologies through practical, reliable, and sustainable engineering.

WHY SWISS CONTROLS

Independent Engineering

Technology-neutral engineering based entirely on our clients' operational requirements.

Swiss Quality

Precision, reliability, and engineering excellence define every project we undertake.

Complete Project Lifecycle

From feasibility studies through commissioning and long-term operational support.

Multidisciplinary Expertise

Automation, electrification, system integration, consulting, and project management delivered through one engineering partner.

International Perspective

Supporting projects throughout Switzerland, Europe, the GCC, the Middle East, and Africa.

Long-Term Partnership

We build lasting relationships through engineering excellence, responsiveness, and continuous support.

LET'S BUILD THE FUTURE TOGETHER

Whether you are planning a new industrial facility, modernizing an existing plant, or seeking an experienced engineering partner for automation, electrification, and system integration, Swiss Controls is ready to support your project.

Our multidisciplinary engineering team combines technical expertise, international project experience, and Swiss engineering standards to deliver reliable, efficient, and future-ready industrial solutions.

Contact our engineering team today to discuss your next project.
